Why Insurium?
Claims Management

What Do We Do?

Insurium's best-in-breed Claims Management solution is a full-cycle platform for all your claims needs. With our polished UI, adjusters can seamlessly navigate every detail of a specific claim, while having an intuitive user dashboard to guide their daily workflows. Total visibility is crucial to ensuring an adjuster's success. Want to have insight into new diary entries and tasks? We've got that. Want to provide better management to your reserves and claim payments? Our workflows help document and report upon each step of the process. Tired of filing CMS, EDI, state, and all other 3rd party reports? Let our system automate these and file these on your behalf.

How does this impact your business?

We have consistently found that by having complete visibility on each claim, organizations can reduce their overall loss ratio, ensuring better performance across the program. This, coupled with the gained efficiency in the claims management process, has given organizations the opportunity to reduce operational costs and enable their teams to focus on the deeper trends through advanced data analytics. The use of which continues to help drive down the overall combined ratio. At the end of the day, our Claims Management solution is deeply rooted in the continuous success of your organization.

Why does this matter?

What we've realized at Insurium is that our customers care about three things: Driving Premium, Reducing Their Combined Ratio, and Providing Greater Services. Our end-to-end Claims Management solution is uniquely designed to transform the way you handle one of the most critical aspects of your insurance program. With a fully integrated claims solution at your fingertips, your business will become more connected than ever before. Whether it's interdepartmental communications or external 3rd party transference of data, there is no limitation to your ability to access and leverage your claims data.
